Digital.com Names Best Database Management Software of 2021 – AllegroGraph

January 4, 2021 – Digital.com, a leading independent review website for small business online tools, products, and services, has announced the best database management software of 2021. The top solutions were selected based on key features and customer feedback.

Experts at Digital.com evaluated platforms with multiple deployment options, such as web-based, cloud-based or SaaS. Each platform was required to back up and recover information periodically to help prevent data loss. Additional qualifications include reporting tools to monitor performance and improve customer service.

"Database management systems are essential for many industries, including banking, manufacturing, and sales," says Josephine Miller, PR Manager of Digital.com. "This guide was developed to help small businesses identify must-have features, pricing, and the pros and cons."

Franz's AllegroGraph was identified as one of the best database management software products of 2021.
